

MODULE 1: CRM

BR#	Requirement Description	Remarks
BR1	The system must function as a centralized CRM platform to capture, manage, and track leads from multiple sources.	
BR2	The system must support lead capture manually from third-party platforms (IndiaMART, TradeIndia), existing customers, and internal networks.	
BR3	The system must maintain a unified lead database with source categorization and no duplication.	
BR4	The system must allow user to record remarks against each lead with outcomes such as Called, Not Interested, Dead Lead, Follow-up (with date/time), and Interested.	
BR5	The system must support tracking of follow-ups within lead remarks.	
BR6	The system must convert leads marked as “Interested” into Positive Leads while retaining complete interaction history.	
BR7	The system must allow generation of quotations for Positive Leads including item details, pricing, and terms.	
BR8	The system must support multiple revisions of quotations and maintain version history for negotiation tracking.	
BR9	The system must support sharing of quotations with customers in PDF format.	
BR10	The system must capture and track customer responses to quotations including approval, rejection, or revision requests.	
BR11	The system must allow uploading of customer Purchase Orders (PO) where provided and link them to the corresponding quotation.	
BR12	The system must allow continuation of the process even if a Purchase Order is not provided by the customer.	
BR13	The system must allow generation and sharing of Proforma (Proforma/Sudo) Invoices for advance payment.	
BR14	The system must allow production teams to view relevant order details (Quotation/PO) for execution readiness. <i>(Production execution is out of scope for this phase)</i>	

MODULE 2: QA

BR#	Requirement Description	Remarks
BR1	The system must include a QA-QC stage where users can record quality checks and validation details before dispatch.	
BR2	The system must capture and record the results of QA/QC checks for each product.	

MODULE 3: Shipping

BR#	Requirement Description	Remarks
BR1	The system must allow users to capture serial numbers for each item quantity before dispatch (e.g., multiple serial numbers for multiple units).	
BR2	The system must allow marking of order Status along with shipment details.	
BR13	The system must support Updation of order status through stages such as Dispatched, Reached Hub, Out for Delivery, Delivered, and Installed.	
BR4	The system must allow updating of delivery and installation statuses during the installation phase.	
BR5	The system must allow uploading of installation and Installation reports after completion of installation.	
BR4	The system must support a commissioning process after installation to validate product functionality at the customer site and confirm successful handover.	

MODULE 4: Warranty

BR#	Requirement Description	Remarks
BR1	The system must manage warranty at an individual product level, uniquely identified by serial number.	
BR2	The system must support configurable warranty periods based on product type.	
BR3	The system must allow to initiate and track warranty start and end dates upon product installation.	
BR4	The system must allow logging and tracking of service requests under warranty for each product.	
BR5	The system must ensure that all repairs and replacements performed within the warranty period are recorded.	

MODULE 5:AMC

BR#	Requirement Description	Remarks
BR1	The system must support Configuration of multiple AMC (Annual Maintenance Contract) plans for products after warranty expiry.	
BR2	The system must allow configuration of AMC plan types with defined attributes such as coverage scope, visit frequency, and service inclusions.	
BR3	The system must define and manage coverage rules for each AMC plan, specifying which parts or services are covered (free) and not covered (chargeable).	
BR4	The system must track AMC validity period for each product (serial number) and link all associated service activities to the selected AMC plan.	
BR5	The system must track and manage scheduled service visits based on the AMC plan type, including number of visits and frequency.	
BR6	The system must identify and differentiate between covered and non-covered items during service execution under AMC and trigger appropriate actions (e.g., quotation for non-covered items).	

MODULE 6: SERVICES

BR#	Requirement Description	Remarks
BR1	The system must support Adhoc Service requests & Service Ticket management.	
BR2	The system must support service classification as Adhoc (on-demand) service requests.	
BR3	The system must capture complete service details including issue reported, diagnosis, actions taken, parts replaced, and service dates.	
BR4	The system must support configurable service and inspection charges applicable for Adhoc service visits.	
BR5	The system must allow generation of quotations for Adhoc services involving chargeable repairs or parts, followed by customer approval and Purchase Order linkage.	
BR6	The system must maintain a complete service history for each product (serial number) including all Adhoc service activities.
